

littershark[®] *Level Measurement System*

The ***littershark***[®] underground with level measurement system proves that new communication systems revolutionise the disposal market. The optional level measurement system is network-independent and based on the technologies supersonic, GSM, GPRS and radio communication. Measurements can be read online out of a central database in the internet and may be processed. This allows an optimized emptying cycle with real cost control.

Very simple and quick installation and set-up of the communication and measurement unit.

Secure and clearly arranged internet portal.

littershark[®]

Level Measurement System

Your advantages:

- **Minimal telecommunication costs**
Application of the cost saving combination GSM/GPRS/radio communication
- **Efficient allocation of resources**
Concentration on essential activities and deployment as well as reasonable route planning
- **Controlling**
Cost control, exact measured values serve as a basis for custom made contracts with service companies
- **Amortization**
Achieved in 12 – 18 months
- **Upgradeable system**
Installed containers or measurement systems can easily be retrofitted on site
- **Proximity to service**
Only one partner for service and support
- **Minimal entertainment costs, high autonomy**
Life cycle of the battery 7 years, depending on application, range of use, frequency of data transfer and network covering
- **Secure and clearly arranged internet portal**
Password protected, online measured values, cycles etc. – all data can be processed as SQL, XML or Excel
- **High reliability, very solid system**
References available
- **Customer specific remote programming**
System adaptations, software upgrades and fault repair
- **International system solution**
Our systems can be operated with international SIM-cards
